

To move all the geometry:  
Choose "Move Translate"

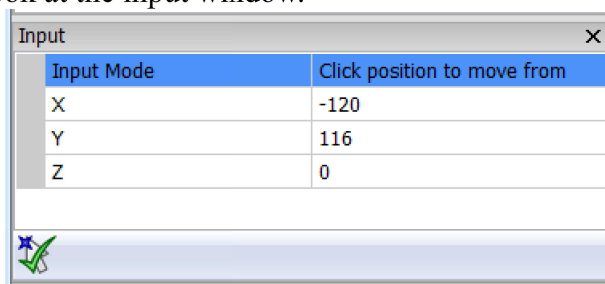

Then look in the input window

If you haven't got anything selected already, it will ask you to "Pick objects to move"

You can do this by dragging a window with your mouse across the items in the graphics window ( start pressing the left mouse button when you are off to the bottom right of the objects to pick and let go of the left mouse button when you are off to the top left ), or press "Ctrl" and "A" to select everything. The press the "Finish picking" button on the input window.

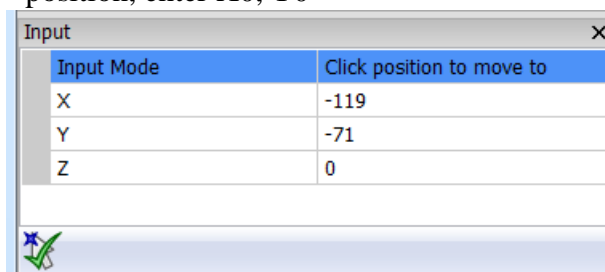

Then look at the input window.

Enter X80 Y67.5

Press the Finish picking button.

For "To" position, enter X0, Y0

Press the Finish picking button.

The geometry will all have got moved.
